ABOUT

I run AI video and visual production end to end: concept, prompt engineering, generation, edit, color, without handing any stage to someone else. Two years into this after a background in commercial photo and video, I taught myself direction and cinematography from films rather than courses. I approach new AI tools the same way, taking them apart until the output holds up next to traditionally shot work, not just next to other AI output. Every project in my portfolio is self-initiated. I write the brief myself, then build to it.

EXPERIENCE

Independent AI Production Practice

2023 – present

Self-directed, remote

- Built four complete case studies from concept to delivery, each covering a different production problem: a full brand identity system (mascot, packaging, mockups, launch video), a consistent AI character across 5–6 angles solving the "drifting face" problem common to single-prompt AI portraits, a code-driven motion piece (Remotion, React/TypeScript, 1920×1080 60fps), and a six-story genre reel testing range across lighting, edit rhythm, and tone.
- Run the full generation stack (Kling 3.0, Seedance 2.0, Veo 3.1, ChatGPT Images, Nano Banana) into a DaVinci Resolve/Remotion finishing pipeline, with no separate colorist or editor.

Content Manager & Visual Producer

Apr 2025 – Jun 2026

Fresh Auto (Bars Auto Holding), Omsk

- Owned the full visual pipeline for vehicle listings solo: shooting (mirrorless, studio lighting), retouching, and layout. That work is usually split across four separate roles.
- Delivered 9 finished Stories a day in Figma against a fixed template, sustaining that volume without a quality drop-off.
- Prototyped an automation pipeline (Claude Code, Figma MCP) that removes backgrounds, inserts listing data, and exports a finished Story automatically, cutting a manual, repetitive step out of the daily workflow.

SELECTED PROJECTS

SELF-INITIATED

Gump Donuts: Brand Identity + AI Video

Full identity system built from zero: logo, mascot, packaging, van/apron/merch mockups, launch video.

Midjourney · Nano Banana · Photoshop

SELF-INITIATED

AI Character Consistency: "Model Passport"

A repeatable process that holds one AI character's face and proportions steady across 5–6 angles and outfit changes. Solves the identity drift that breaks single-shot AI portraits past the first angle.

Freepik Spaces

SELF-INITIATED

Motion Teaser: Remotion

Kinetic typography and icon animation built in code rather than a timeline tool, taken from concept through a 1920×1080 60fps render.

Remotion · React · TypeScript

SELF-INITIATED

Portfolio Site: hopelessblessed.online

Designed and built solo, bilingual RU/EN, deployed on a custom domain. Concept through production, no template.

Next.js 16 · Tailwind v4 · Framer Motion

SKILLS

AI Creative
Kling 3.0, Seedance 2.0, Veo 3.1, ChatGPT Images, Midjourney, Nano Banana 2, Freepik Spaces

Design & Branding
Figma, Photoshop, brand identity systems

Video & Motion
DaVinci Resolve, CapCut, Remotion (React/TypeScript)

Automation & Dev
Claude Code, n8n, Figma MCP, Next.js
